Website

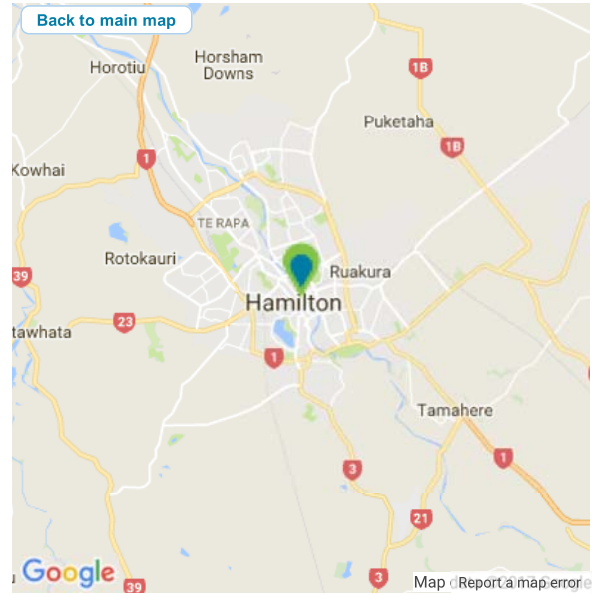

This project will develop a set of guidelines that encompasses different scenarios in an easy to read format that will assist in the management of willow and alder across the catchment.

This project brings together all organisations that have an interest in the management of willows and alders in the Waikato region in a "think tank". This will follow the aims of the land and water forum (www.landandwatercare.org.nz) in that it will be a collaborative process and we will aim for consensus in developing the guidelines.

We will employ the services of an independent facilitator to assist with the 'think tank' sessions as it will allow all (even potentially conflicting) views to be heard and agreement to be reached by all stakeholders in a safe environment.

This project is funded by the Waikato River Authority (WRA 13-021)
