

Re. Water - Proposed Waikato Regional Plan Change I
or Whatever takes its Place

Ladies and Gentlemen - Tena Koe.

Resource management in view of the future -
for an increasing population with ever increasing expectations
for living standards, including recreation, food and water
quality, ethical considerations, etc.and
for changing methods of production (shifting from meat and
milk to other protein sources, with the former becoming luxury
items) means:

Rectifying past mistakes,
Preventing new mistakes,
Tightening of criteria for allocation,
Preventing over-allocation/ depletion,
Building up resources,
Reducing waste, continually.

Applied to water:

Write draft document – done.

Adhere to the definitions valid at beginning of consultation
period - not shifting goalposts; please reverse.

Use all means necessary to achieve aforementioned goals.

Set timeline that achieves those goals.

Thanks

G. Ludtke-Faber
